“ ABOUT A-CERTS

The Association of Company Emergency Response Teams (Singapore) (A-CERTS) is a non-profit organisation which is established in the year of 2011, with the support from Singapore Civil Defence Force (SCDF). Since then, A-CERTS has embarked on a journey to establish a platform for emergency responders and companies to join as individual/corporate members to share their experience and network with each other. We also aim to create professional development opportunities within our fraternity.

With the aim to align with the industry standards of excellence, A-CERTS continues to work side-by-side with government agencies in developing and enhancing training courses and setting quality benchmarks in the field of Emergency Response & Crisis Management.

“ ABOUT CERT CONNECT 2024

CERT Connect is another annual event of A-CERTS, albeit on a smaller scale than the CERT Seminar.

It is through the CERT Connect platform that we organise presentations, dialogues, engagement workshops and learning sessions where different tiers of CERT members, stakeholders, industry leaders, and authorities can come together. The purpose is to share new ideas and initiatives, that could benefit the premises and its CERT members, FSMs, WSHOs and related stakeholders.

PROGRAMME

12.00–1.00pm

Registration / Guests to be seated

1.00–1.05pm

Opening Speech

1.05–1.30pm

“ SYNOPSES

[Presentation 2] Protecting Yourself in order to Protect Others

Mr. Steven Kosch, 3M PSD Global Applications Eng

For first responders to effectively assist others, they need to ensure their own safety. If they're not protected, they risk becoming victims themselves, which can further strain resources and potentially hinder the help they provide. Ensuring their own safety—through proper training, equipment, and protocols—is essential for them to be able to perform their duties and save lives effectively.

"Protecting Yourself in order to Protect Others" is a key principle in emergency response and safety. It means that first responders need to prioritize their own safety to be effective in their roles. In this 30 minute presentation Steve will briefly discuss the topic in an effort to help the Responder protect themselves in order to protect others.

[Presentation 3] Making Sense of Fire-Resistant Garments Terminology

Mr. Lee Chew Leng, TENCATE Protectivefabrics

The session will delve into the essential industrial standards that govern the production and testing of fire-resistant fabrics. Understanding these standards is crucial for ensuring the effectiveness and reliability of FR garments in different work environments.

Explore two common blends used in fire-resistant garment composition, highlighting their unique properties and advantages, to make informed decisions when selecting FR clothing for different applications. Learn how to choose the right fire-resistant garments and best practices for maintaining them.

“ SYNOPSES

[Presentation 4] CPR-AED: Anything can happen, Anyone can help

Ms Rachel Ng, ZOLL Medical Singapore Pte. Ltd.

This presentation provides a brief overview of Sudden Cardiac Arrest (SCA). Gain a deeper understanding of SCA, its causes, and why immediate action is crucial in saving lives. Learn more about high-quality CPR and the necessary steps to take when faced with a sudden cardiac arrest situation, including how to assess the situation and respond effectively. Explore strategies and techniques that can significantly increase the chances of survival for SCA patients, highlighting the importance of timely interventions.

[Presentation 5] Basic Knowledge Of Hazmat Suits and the Use of It

Mr. Stephen Ng, ANSELL Protective Solutions Singapore Pte Ltd

Explore the application of Hazmat suits in various zones to ensure effective protection against hazardous materials, understanding the importance of proper suit selection based on the environment. Learn about different types of Hazmat suits available and the standards that regulate their design and performance, enabling participants to make informed decisions when selecting the appropriate suit. Differentiate between reusable and limited-use Hazmat suits, highlighting the advantages, limitations, and maintenance requirements of each type to ensure optimal protection and longevity of the suits.
